

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) An air discharging device (1) for a motor vehicle, comprising a discharge nozzle (2) and at least one air flow guide element (4), wherein at least one actuator is provided and can be electrically actuated.
2. (Currently amended) The air discharging device as claimed in claim 1, wherein the actuator (6) is arranged on the outside of the discharge nozzle (2).
3. (Currently amended) The air discharging device as claimed in claim 1 ~~or 2~~, wherein the actuator (6) is in the form of a module which is integrated in the discharge nozzle (2).
4. (Currently amended) The air discharging device as claimed in ~~one of claims 1 to 3~~ claim 1, wherein an electronic circuit (10) is provided and is electrically connected to all of the actuators (6).
5. (Currently amended) The air discharging device as claimed in claim 4, wherein the electronic circuit (10) is arranged on a flexible circuit carrier (8).
6. (Currently amended) The air discharging device as claimed in claim 5, wherein the electronic circuit (10) is designed as an MID component, with a casing of the air discharging device being designed as a circuit carrier.
7. (Currently amended) The air discharging device as claimed in claim 5 ~~or 6~~, wherein contact is made with all of the actuators (6) directly by means of the flexible circuit carrier (8).

8. (New) The air discharging device as claimed in claim 2, wherein the actuator is in the form of a module which is integrated in the discharge nozzle.
9. (New) The air discharging device as claimed in claim 2, wherein an electronic circuit is provided and is electrically connected to all of the actuators.
10. (New) The air discharging device as claimed in claim 3, wherein an electronic circuit is provided and is electrically connected to all of the actuators.
11. (New) The air discharging device as claimed in claim 6, wherein contact is made with all of the actuators directly by means of the flexible circuit carrier.
